

PureSip Beverages Co. — Sustainability Data 2025

Sustainability Data Summary 2025

PureSip Beverages Co. produces bottled water and flavored drinks. This document reports verified operational data for the 2025 reporting period.

Packaging

Our standard 500ml bottle contains 25% recycled PET (rPET). Caps and labels are virgin plastic. The 'Nature's Choice' premium line uses 30% rPET bottles.

Total plastic used in 2025: 14,300 tonnes. Recycled content across all packaging: 22% by weight. We do not operate a take-back or bottle-return scheme.

Recycling Reality

Independent studies indicate approximately 31% of our bottles are actually recycled post-consumer; the remainder go to landfill or incineration. 'Recyclable' labeling does not guarantee a bottle is recycled.

Emissions & Energy

Scope 1: 5,400 tCO₂e. Scope 2: 22,700 tCO₂e. Scope 3: 188,000 tCO₂e. Total: 216,100 tCO₂e.

Renewable energy accounts for 9% of total consumption (rooftop solar at one plant). The remaining 91% is drawn from the national grid.

Water Stewardship

Water extraction at our Batangas source increased 12% year-over-year. A local community petition regarding aquifer levels is under review. We report a 5% reduction in water use 'per litre bottled' — but total extraction rose due to higher production volume.

Certifications

No third-party sustainability certification. 'Eco-Bottle' and 'Nature's Choice' are internal brand names, not certified eco-labels.
