

Solara Energy — Sustainability Report 2025

Solara Energy — Integrated Sustainability Report 2025 (Third-Party Assured)

Solara Energy operates community solar installations. This report is externally assured by an accredited auditor (assurance statement, Appendix C).

Emissions (All Scopes Reported)

Scope 1: 1,100 tCO₂e. Scope 2: 3,400 tCO₂e. Scope 3: 12,900 tCO₂e. Total: 17,400 tCO₂e. We disclose all three scopes and set a science-based target validated by the SBTi to reach net zero by 2040, covering 90% of value-chain emissions.

Renewable Generation

In 2025 our installations generated 240 GWh of clean electricity, independently metered and verified. We avoid using the term 'carbon neutral' as our residual emissions are not yet fully offset; we report progress against our 2040 target instead.

Materials & Recycling

Panel recycling program recovered 78% of decommissioned panel mass by weight, documented in Appendix B. We publish the methodology and third-party verification for this figure.

Certifications

ISO 14001 (company-wide), B Corp certified (score 96.4), SBTi-validated targets. All claims in this report are substantiated with cited evidence and external assurance.
